

## PHYSICIAN ALLERGY JOB APPLICATION PROOF READING AND REWRITE

Why would I be the perfect fit for your allergy practice?

I realized early on in my medical career that the world of allergy and immunology is not limited to one system, but encompasses multiple, interrelated aspects of the body. Each of my experiences, whether related to clinical work or research, has furthered my intrigue with the field of Allergy Immunology and has heightened my interest in pursuing this career.

Completing my medical school training from a highly populated government-run college in India, and then following this with Pediatric Residency training in a university hospital with a good number of clinical cases, I have developed a strong clinical background. Also due to my hardworking nature, I was fortunate to have seen more than 900 patients in my fellowship.

I have a history of severe asthma as a child. And, it was due to the persistence and skill of my physicians and other medical staff, that helped me manage my symptoms better and have an improved quality of life. This personal experience has been my inspiration. And, I want to help my patients realize how regular monitoring and treatment can help prevent serious asthma attacks.

I also feel that I am culturally competent and that this diversity will be an added strength to this practice. I am willing to learn, accept feedback, and listen to the concerns of those around me. And, I believe this will be a valuable asset in establishing a practice.

In addition to clinical work in Allergy Immunology, I have been active in the area of research and quality improvement projects. I am involved in creating an anaphylaxis protocol that can be easily used by our office staff in case of any emergency that arise after allergen exposure (example after giving immunotherapy). As part of this project, I have led many group education classes to help our clinical staff understand the importance of identifying patients with anaphylaxis and implementing the necessary measures to help patients in a timely fashion. This project is one such example of how I am continually participating in serving and educating people towards better health.

I am also the primary investigator in an ongoing survey-based study which looks at the quality of life scores among children with persistent asthma and comparing it with normal healthy subjects. I have learned valuable lessons in management skills like planning, delegation, and communication through this project.

My zest for knowledge and ability to go the extra mile, have always been some of my strongest attributes, as have my commitment to teamwork, my meticulous nature, and my sincerity with patients and colleagues.

I am known among my associates to be always pleasant, but at the same time maintain a professional attitude towards problems. From day one of medical school, I felt it was my purpose to serve and educate people towards better health.

I realize that, as a physician, I may not always be able to reach an accurate diagnosis. However, with every patient, my aim has been to reduce suffering in the best possible manner. I believe that my dedication and determination toward alleviating pain in whatever way I can has driven me so far, and I look forward to continuing this in my future endeavors.

I look forward to working with you as I realize we share the same passion for providing the best quality healthcare to people in an atmosphere of friendship and professionalism.
